TEAM KRATOS-X

Lefty

An assistant that does it with you, in any app on your PC.

Sanjay · Varun · Josheetha · Kishore · Sriram

THE PROBLEM

Software is hard to learn

Help lives elsewhere

Tutorials and videos sit in another window. You keep switching back and forth, and lose your place.

Every app is different

Each one hides its features in its own menus. What you learned in one does not help in the next.

Chatbots only talk

They describe steps in text. You still have to find every button yourself.

MEET LEFTY

Press Ctrl+Space in any app, say what you want, and Lefty gets it done with you.

Learn

He points at the next button. You click it, and he checks it worked.

Do it

He clicks and types for you while you watch, and stops the moment you take over.

HOW IT WORKS

One step at a time, checked

Read

Windows UI Automation lists every button on screen.

Decide

The AI picks the one next step toward your goal.

Act

He points at it, or clicks and types it himself.

Check

He confirms it worked before the next step.

Because he reads real buttons instead of guessing from pixels, he works in almost any Windows app.

WORKING TODAY

What Lefty does today

Guided steps

In any app, even with typos in your request.

Do it for me

Clicks, types and fills dialogs while you watch.

Code help

Ghost code to type along, and finds and fixes errors.

Builds websites

Writes every file, then opens it in VS Code or the browser.

Voice

Hold Ctrl+Space and say your goal, in any language.

Focus mode

Closes distractions until your work time is up.

TRUST

You stay in control

- Asks before deleting, buying, sending or installing
- Never types into password boxes
- Chats stay on your PC or your own database
- Stops the moment you press Esc, click or type
- Acts only in the app the task is about
- Uninstall closes him and every helper cleanly

ROADMAP · IN PROGRESS

What we are building next

Always visible

A floating companion with a live status of what he is doing.

Native ghost code

Inside VS Code and PyCharm, Tab to accept.

PDFs and images

Upload a question paper, get every answer.

Places

Cafes and spots with price, rating and his pick.

Image generation

Logos and pictures for the websites he builds.

Permission levels

Ask every time, Auto or Full access, with a terminal.

ROADMAP · IN PROGRESS

Our own brain, on our own laptops

Eyes

A small vision model reads screenshots and photos.

Brain

An 8B model, fine-tuned on Lefty's own steps, plans and decides.

Ears

Speech-to-text runs locally, so voice works offline.

Wi-Fi off, Lefty still works. Private screens never leave your machines. The cloud stays as a backup.

ROADMAP · IN PROGRESS

He gets better with use

Memory, after every chat

A task he has solved once replays directly, with no AI call.

[__ s] → [__ s]

First run versus replay, same task

Fine-tuning, every week

Verified steps train the next version of Lefty-8B.

[__%] → [__%]

Base model versus Lefty-8B, 20-task benchmark

WHO IT IS FOR

Who needs Lefty

Students and new users

Learn any app by doing it, with a patient guide beside you.

Accessibility

Older people and low-vision users get tasks done by voice.

Company training

Onboard staff on any software with no per-app setup.

Developers

Ghost code, error fixing and project building in one assistant.

THE TEAM

Team Kratos-X

Sanjay

Lead. Frontend and backend.

Varun

AI. Local models and fine-tuning.

Josheetha

Design and testing.

Kishore

Editor integrations.

Sriram

Voice and dashboard.

Lefty

Does it with you.

Thank you. Now let us show you.
